

ABSTRACT

Project Name: Online Soccer League Management

Completion Level: 60 % of mini project.

Online Soccer League Management is all about providing a facility to register online for a soccer match along with a team management. The registration can be done in 3 ways club registration, player registration and manger registration. Here managers refer to the coach of the club. Once the club is registered in the site they can recruit players and coaches according to the application given by the each player to the corresponding club. The club can register for the matches. After attain the sufficient number of players the club can register for a match with other available team. These booking and payment for the matches will be maintained by admin. Also admin can update the venues for the matches. The existing systems only provide facility to book the slot for the matches. But this system overcomes with good team management option too. Overall this site will be a great asset for upcoming young generation who loves football.

The proposed system comes with a team management facility along with the slot booking and payment for the match. Club can register for a match. They can able to select the venue. A payment will be there for each match.

Stakeholders:

- Admin: Update Venues, Maintain payments
- Club : Register for match, Recruit players, view players, view coach
- Players: Apply for club, view club statistic
- Coach : Select team, view players

Main Modules:

- Login
- Registration
- Team Management
- Venue booking
- Payments

Functionalities:

- Team Management: Club can form a team along with a coach from the request received.
- Venue Booking: After forming a team club can book for match.
- Payments: For each game booking a fee will be there.
